Alec Bhamani

UW–Madison Data Science · Predictive modeling & ML systems · Open to 2026–27 internships
Madison, WI · alecbhamani8@gmail.com · (325) 248-7320 · alecbhamani.com · github.com/AlecBhamani1 · LinkedIn

Data Science undergraduate who actively builds models and decision making tools, retail promotion windows, from-scratch language models, and retrieval systems. Comfortable moving from analysis in Python to a working prototype teammates can use.

EDUCATION

University of Wisconsin–Madison · B.S. Data Science · GPA 3.7 · Madison, WI Expected May 2028
Coursework: Probability & statistics, linear algebra, computer science (Python, Java), clustering and regression, web development (Flask)

SKILLS

Languages: Python, R, Java, TypeScript
ML & data: PyTorch, Pandas, NumPy, scikit-learn, FAISS, sentence transformers, regression, clustering, model evaluation
Software: Git, Flask, React, APIs, pytest, Linux, technical documentation

EXPERIENCE

Associate Consultant · Krahnborn · Madison, WI Jan 2026 – Present

- Executed a client data migration covering ~557 accounts and 9 sales codes: resolved account ownership, mapped legacy names to Salesforce IDs, and imported AccountTeamMember records via Salesforce Inspector, working around single-threaded batching.
- Built Krahnborn's internal Claude Cowork plugin marketplace with 4+ reusable skills and a pre-code-research Claude Code skill to standardize AI-assisted delivery.
- Built a multi-org Salesforce sync that consolidates client service tickets into a single internal object with near-real-time updates and config-driven per-client field mapping.

Bar Manager & Catering Staff · Wisconsin Union · Madison, WI Aug 2024 – Jan 2026

- Promoted to Bar Manager; coordinated staff for high-volume campus venues and events while keeping service reliable during peak hours.

Jr. Project Engineer · Blue Lynk, LLC · Austin, TX Jan 2020 – Oct 2022

- Closed 20+ interactive document projects for school districts, municipalities, hospitals, and semiconductor clients with a 100% customer-satisfaction rate on cloud deliverables.

TECHNICAL PROJECTS

Crystal Farms & Cub Foods promotion model · 1st place, UW–Madison Tech Exploration Lab Python · predictive modeling · retail sales

- Worked in a team of four to turn historical Crystal Farms / Cub Foods sales into predicted promotional windows aimed at profitability, not just unit volume.
- Contributed colaborator to the Python modeling workflow and the analysis the team used to compare discount timing and present a ranked set of windows.

Decoder-only GPT training stack · Independent Python · PyTorch · NLP

- Implemented a GPT-2-style decoder (causal attention, tied embeddings, KV-cache generation) with resumable pretraining, assistant-only chat fine-tuning, perplexity eval, and Hugging Face / Ollama export.
- Checked-in presets calculate 7.27M, 51.24M, and 124.48M parameters; pipeline covers data prep → train → chat tune → evaluate → export.

Skillmap · Independent Python · retrieval · knowledge graphs

- Built a CLI that indexes agent skills, extracts concepts, and ranks a scoped neighborhood so only relevant tools surface for a work query.
- Added redirection-aware ranking, incremental graph updates, and a 55-test suite; a diagnostic run ranked 8/8 curated and 3/3 adversarial queries first while averaging 1.8 of 5 skills per query.
